BEAR-O'CLOCK

Step by step guide + template

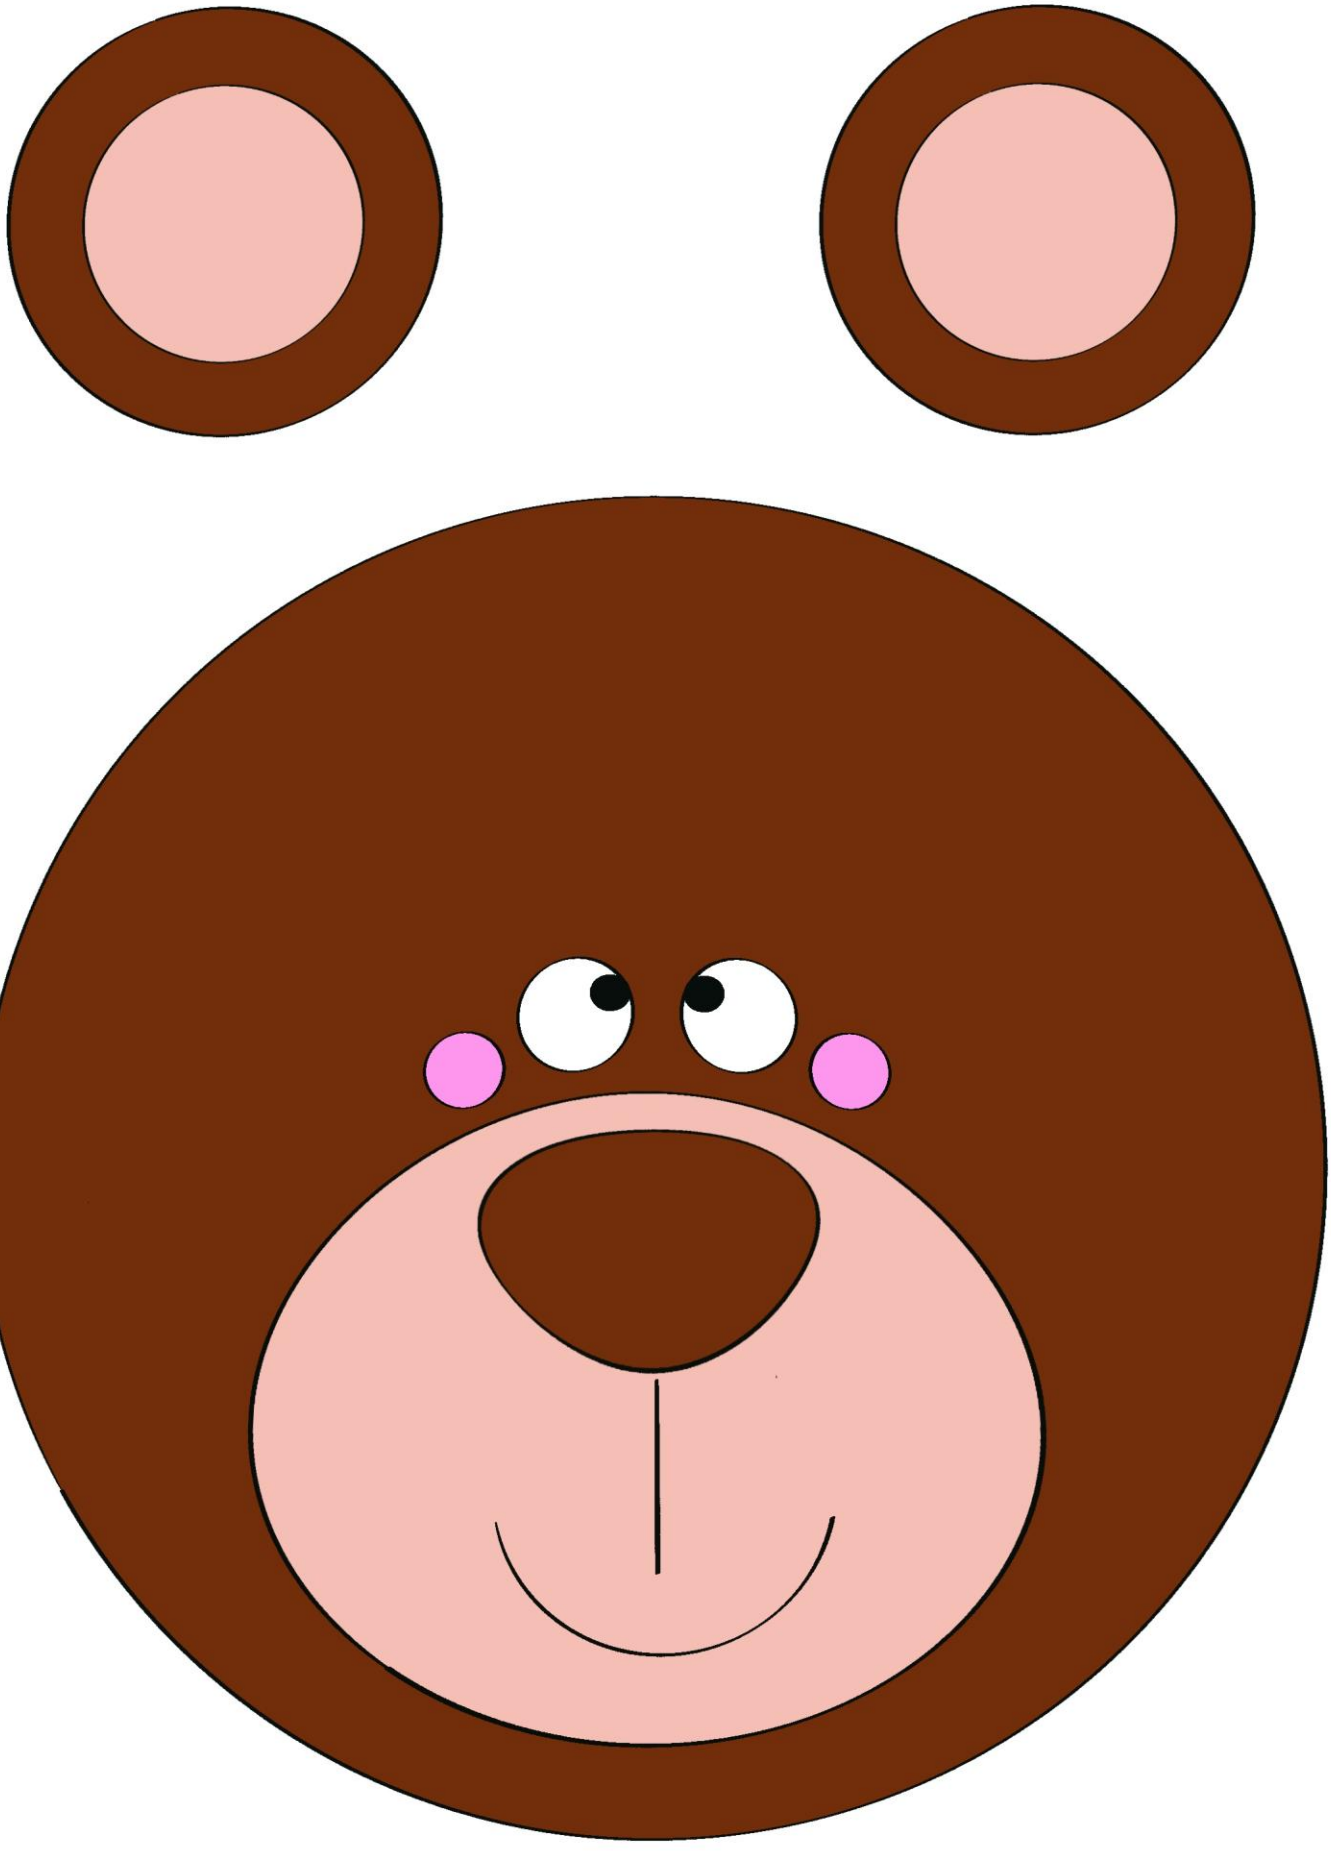

MATERIAL:

- 1 box of Danish biscuits, round and tin, diameter approx. 19/20 cm
- 2 cylindrical jars, about 6 cm in diameter (I used 2 baby food jars, but you can use jam jars or any other jars)
- Glue sticks everything, I used Bostik Max Repair
- 1 clock mechanism, I got these and gave them a spray of white
- 1 Phillips screwdriver and a hammer to make the central hole (or, if you have one, a drill with a special tip)
- Brown acrylic spray, I used this one from HQS
- White and light pink and bright pink or red paint or permanent markers (for cheeks)
- Black permanent marker
- Transparent glossy protective spray, I used this one from Arexons

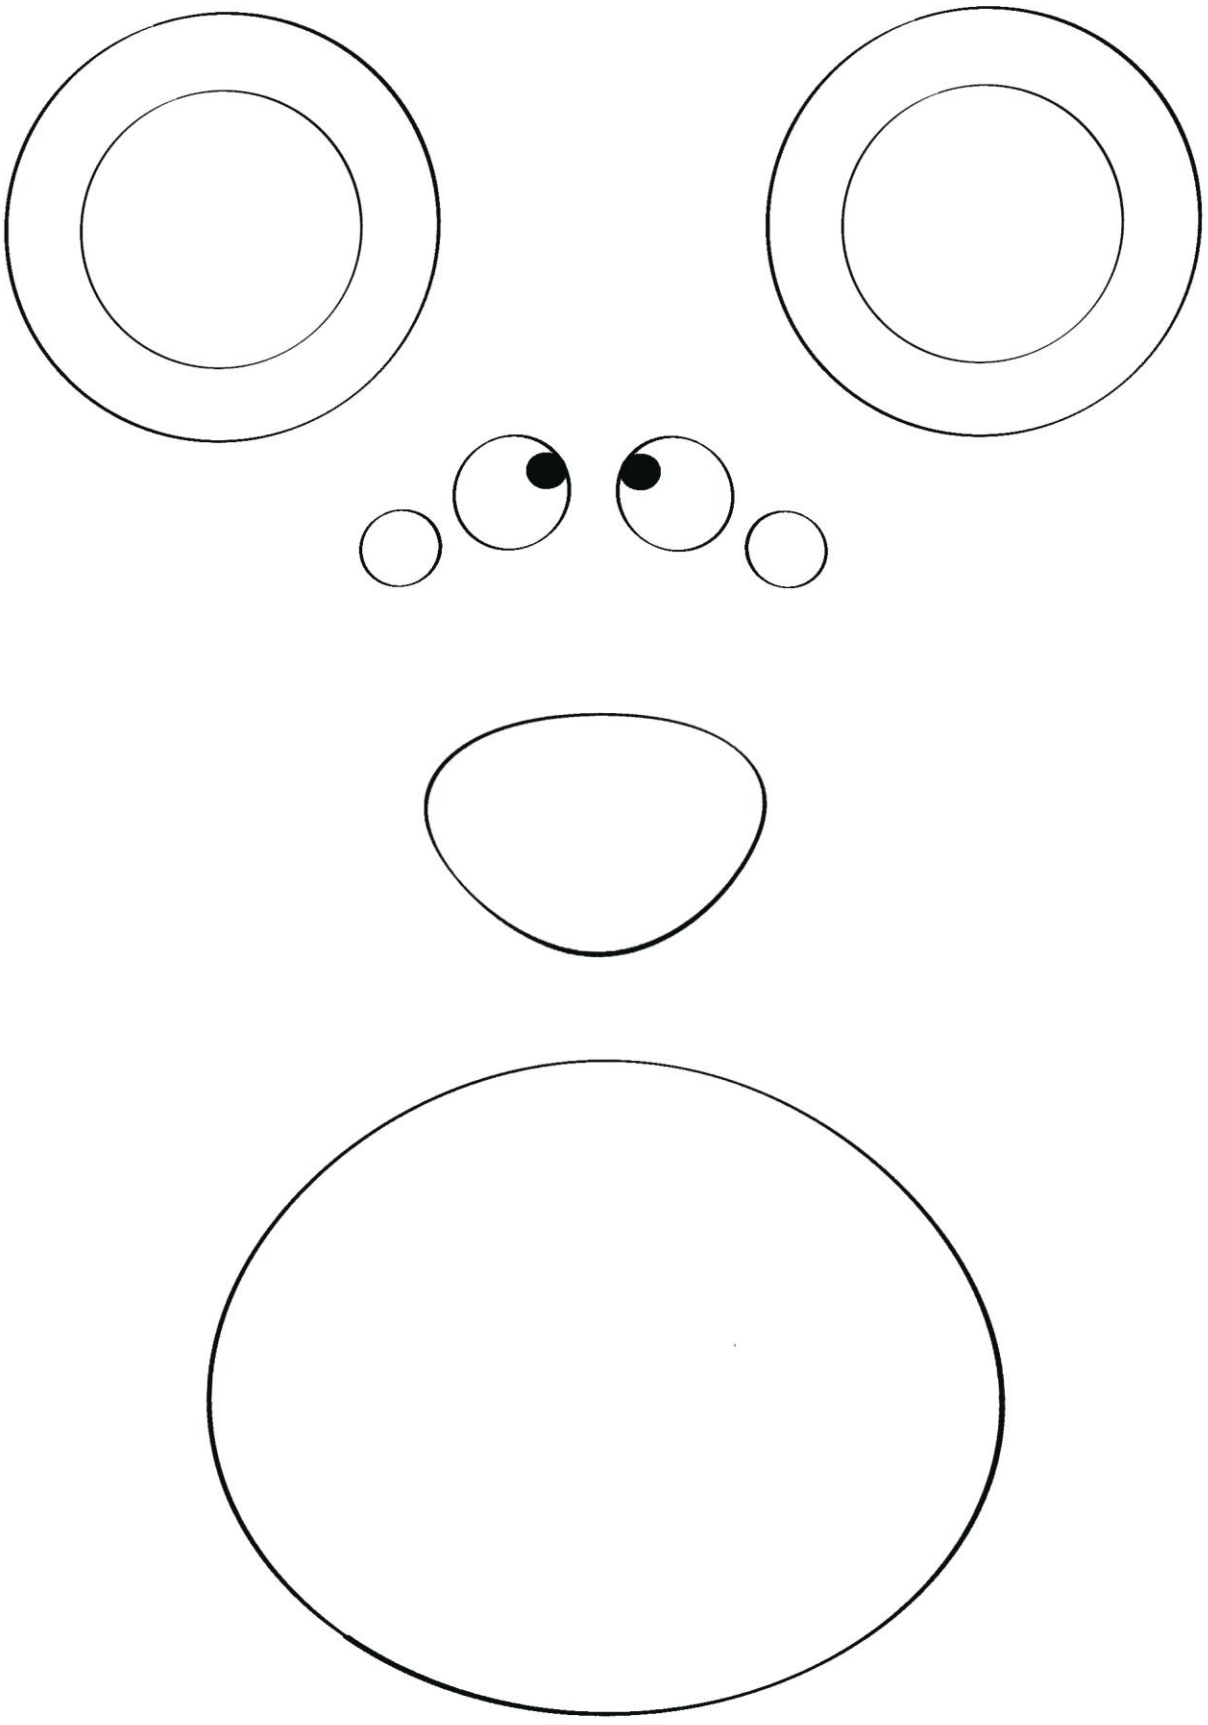

INSTRUCTIONS:

- Take the bottom part of the box (the highest part, without the lid) and make a hole in the center so that the clock mechanism can be inserted later.
- Spray paint the box you drilled and the two small jars brown.
- Glue the two jars to the box so that they simulate the bear's ears.
- Cut out all the parts of the teddy bear in the template attached to this PDF (if it helps, print it on cardboard, so the support will be more rigid and you will work better)
- Place the cut-out pieces on top of the tin box and mark the outlines following the templates (perhaps use a white or light permanent marker so you can see the mark better: then go over it with paint to avoid it being visible)
- Color the muzzle light pink, leaving a brown space for the nose. Color the inner circle of the ears with the same pink. Color the eyes white and the cheeks pink or red.
- Define the details with black: the pupils and the mouth mark on the muzzle.
- Protect everything with 2 coats of polish spray (but make sure the colors underneath are completely dry first)
- Attack the clock mechanism
- Hang your clock on the wall!

Print this sheet and cut out all the pieces; if it helps, you can print it on cardstock

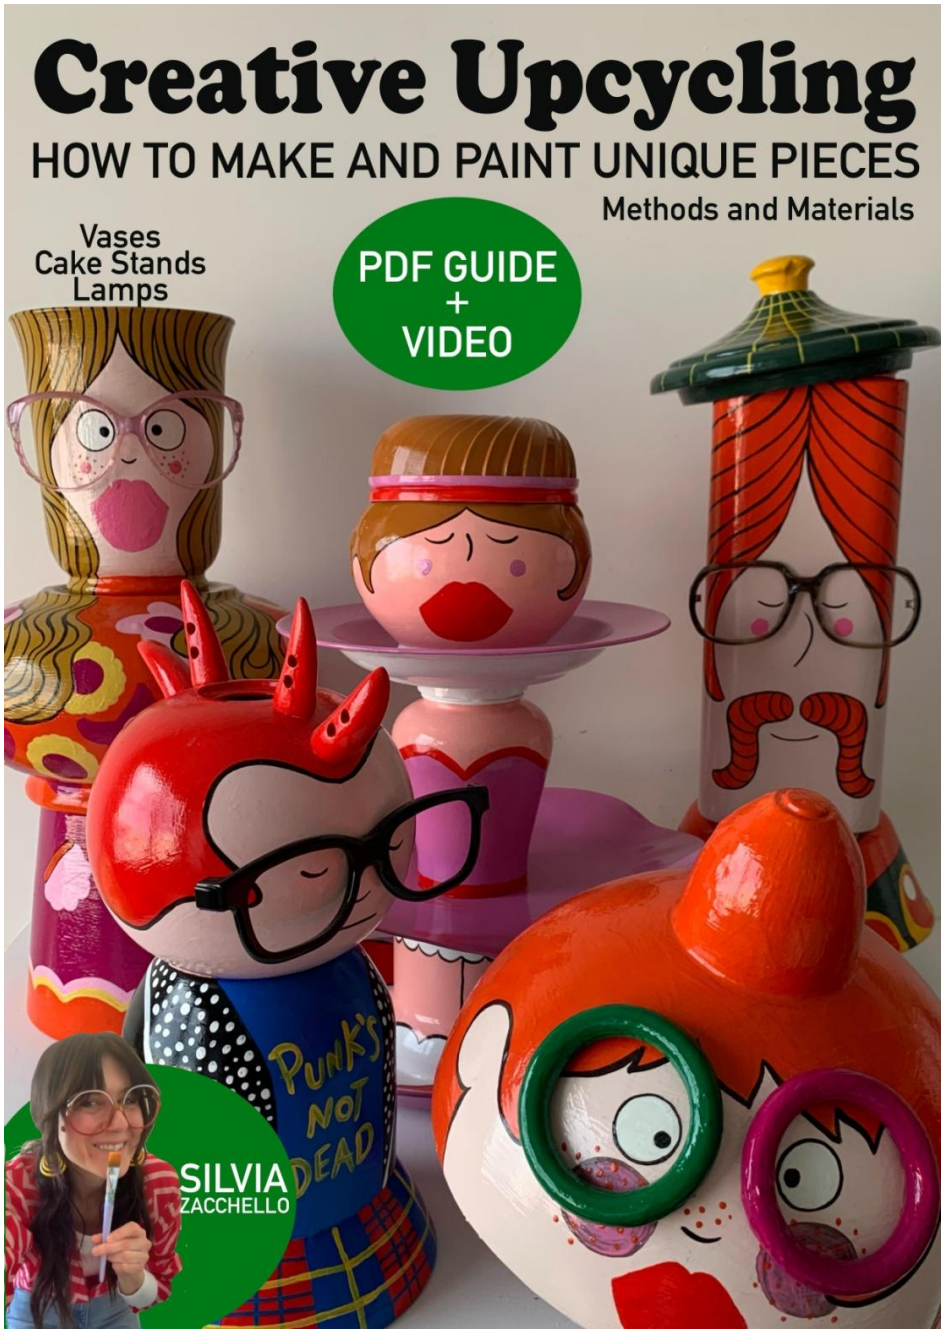

If it's easier for you to cut them out, I've also laid out the pieces like this!

A SMALL GIFT FOR YOU!

Did you enjoy making your **Bear-o'clock?** ? I hope so, and thanks for downloading my PDF!

If you're curious and want to delve deeper into more advanced techniques, knowledge, and materials to learn how to make vases, cake stands, and various objects using recycled materials and more in-depth techniques, I'll leave you the discount code **ORSO20,** which is worth **a 20% discount** on my PDF guide + video dedicated to Creative Upcycling
